INVESTIGATIONS:

Reports Enclosed

COURSE IN THE HOSPITAL:

Patient presented to us with above mentioned complaints. After evaluation, she was admitted to ward. Initial investigations showed normal CBC. Serum creatinine (1.65mg/dl) done was elevated. Serum electrolytes done showed low serum sodium(128.00mmol/L). Urine routine done showed ketone bodies(+), 10-12/hpf of pus cells, 15-20/hpf of epithelial cells with presence of bacteria hence urine culture and sensitivity sent- report awaited. She was treated with IV fluids,

IV antibiotics, IV PPI's, IV antiemetics and other supportive measures. USG abdomen and pelvis done showed Grade-I fatty liver changes and mildly edematous part of ascending colon upto the hepatic flexure- could represent colitis. Repeat Serum Creatinine(1.17mg/dl) done was normal. TSH and Free T4 done were normal. Stool routine done showed 2-3/hpf of red blood cells, plenty/hpf of pus cells. Patient was adviced to stay back for further management but attenders not willing to the same, hence being discharged at request with following advice.

Clinical data: Uncontrolled T2 DM

C. T. KUB (PLAIN)

Protocol :

Plain axial CT scan of the KUB region.

Reformatted coronal and sagittal MPR images.

The Study Reveals

• Kidneys:

- Bilateral perinephric fat plane stranding noted.
- Both kidneys are mildly bulky in size
 - Right kidney measures ~ 12.3 x 6.4 x 6.5 cm. No evidence of hydroureteronephrosis. No calculus seen.
 - Left kidney measures ~ 12.0 x 6.0 x 6.1 cm. No evidence of hydroureteronephrosis. Tiny 1-2 mm calculus noted in the lower pole (496 HU)
- Mild bilateral anterior pararenal (Gerota's), posterior pararenal (Zuckerkandl's) and lateral conal fascial thickening noted.
- No demonstrable calculus in the region of ureters on either side.
- Urinary bladder is partially distended. Foley's bulb noted in situ.
- The visualized portions of the spleen appears normal.
- Liver is enlarged in size (20.0 cm).
- Conglomerated calculus noted in the neck of gall bladder, measuring ~ 1.4 cm.
- Survey of pancreas the of the covered bowel loops grossly appears unremarkable.
- Minimal ascites noted.
- Bilateral mild pleural effusion with underlying subsegmental lung consolidation noted.

IMPRESSION

- ✧ Both kidneys are mildly bulky in size with perinephric fat plane stranding and Mild bilateral anterior pararenal (Gerota's), posterior pararenal (Zuckerkandl's) and lateral conal fascial thickening

→ Features likely suggestive of acute pyelonephritis. Suggested contrast study for further evaluation.

- ✧ Tiny left renal calyceal calculus.
- ✧ Hepatomegaly
- ✧ Cholelithiasis without cholecystitis.
- ✧ Minimal ascites.
- ✧ Bilateral mild pleural effusion with underlying subsegmental lung consolidation.

SAMPLE : URINE FOR CULTURE AND SENSITIVITY-

REPORT : NO SIGNIFICANT BACTERIURIA.

Colony count : Less Than 10,000 CFU/ML
